

IT'S FLOWER TIME!

Here in this bag is everything you need to raise beautiful and fragrant paperwhites, an easy-to-grow type of daffodil.

Place a thin layer of pebbles on the bottom of pot, then place the bulbs, pointed end up...close but not quite touching.

Dribble pebbles all around them and up around their "shoulders" (do not bury them). Pour in some water, only enough to touch the bottom of the bulbs. Replenish to this level every day or so, or as needed. That's it!

Keep the pot in a bright cool room (about 50°) for the first 2 weeks. Move to a warmer and sunnier location after that. In just 2 to 4 weeks, the flowers will burst into glorious and fragrant bloom!

When the show is over, toss out the bulbs. They'll have used up their energy bringing you this wonderful show.

ENJOY – HAVE FUN!
